

Promote accelerated healing by 50%¹

Try the only repair gel for dogs and cats with clinical studies supporting corneal repair

Oculenis™ BioHAnce™ Ocular Repair Gel

- **Only gel eye drops with patented cross-linked hyaluronic acid (HA) designed and tested for pets:**

BioHAnce™ is a unique, crosslinked hyaluronic acid specifically modified for the ocular environment that creates a cellular matrix to enhance an animal's own healing process by optimizing epithelial proliferation.

- **Proven to promote accelerated healing by 50%¹:** Reduce the time patients are in an E-Collar.

- **Formulation based on naturally occurring ingredients:** Contains no preservatives or synthetic additives that cause pain or stinging.

- **Industry accepted:** Millions of doses of BioHAnce technology have been sold to veterinarians.²

- **Formulated for precise dosing:** Gel consistency is easy to control without globbing or dripping, creating a sheer barrier on the ocular surface.

- **Soothes and comforts:** The thin consistency of the gel feels good in the eye without blurring. It also helps minimize friction during blinking to reduce risk of repeat injury.

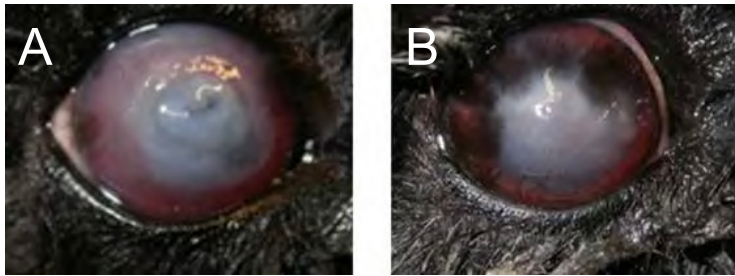

- **Developed, manufactured, and studied in the United States**

1. Williams DL, Wirostko BM, Gum G, Mann BK. Topical cross-linked HA-based hydrogel accelerates closure of corneal epithelial defects and repair of stromal ulceration in companion animals. Invest Ophthalmol Vis Sci. 2017;58:4616–4622. DOI:10.1167/iovs.16-20848

2. Represents the portfolio of eye and wound care products under various brands globally that incorporated the corresponding version of the patented BioHAnce technology.

Clinical Study: Effectiveness

Healing of a corneal ulcer on a 7-year-old mixed-breed dog.

A. Day 21 of the non-healing ulcer.

B. The healed ulcer after 14 days of treatment with xCMHA-S.³

"Oculenis™ has worked very well {supporting their treatment protocol} on those hard to heal corneal ulcers for our clinic. It has an excellent price point and works well in conjunction with the ophthalmic antibiotics, {that may be required once the underlying cause is diagnosed}, {helping in} minimizing healing time {by uniquely providing a cellular scaffolding the supports the animal's own healing processes}."

- Erin Kamysiak, LVT, Jelsema Vet Clinic

Comfort and Care During and Post-Surgery:

- Unique gel is easy to apply
- Great to use with sedated pets during any surgery to help ensure eyes remain hydrated and lubricated

Caution:

Oculenis is an ocular formula that contains the highest eye care concentration of BioHAnce biologically enhanced HA. Oculenis is only meant to support standard treatment regimes and does not act as a stand-alone treatment. Read full instructions.

Due to the risks associated when treating eye injuries, this product is only available by or on the order of a veterinarian.

Clinical Uses:

- Superficial ocular injuries
 - Cuts and scratches
 - Abrasions
- Traumatic ocular wounds
 - Lacerations
 - Punctures
- Foreign objects that perforated the cornea
- Surgical incisions
- Corneal ulcers
